## European Cyberknife Center Munich

The Cyberknife system is the world's first robot-controlled radio surgery system for treating solid tumors. For Drexler+Partner, planning the European Cyberknife Center ([www.cyber-knife.net](http://www.cyber-knife.net)) was a unique challenge. The latest robot technology, combined with ultramodern diagnostic imaging technology, is embedded in a harmonious interior design with soft lines and warm colors. Wooden furnishings and walls form a pleasant contrast with the high-precision robot technology. Dynamic artificial light shows give the rooms a more lively effect.
